Canvas

RIFT

From reporting brief to working draft in minutes

Use AI and configuration as code to build interactive dashboards and formal reports, without separate traditional BI viewer licences.

A portfolio dashboard built on Horizon data, with filters, KPIs and interactive charts.

Develop reports with AI

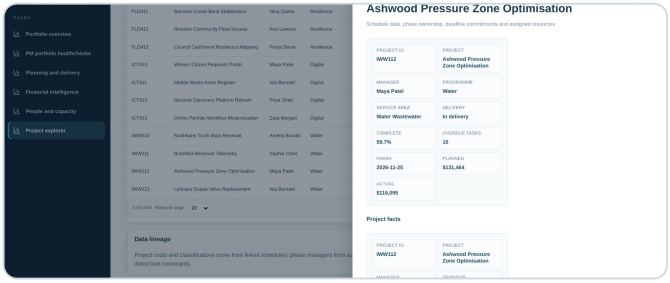

Describe the dashboard or report you need. Review the generated queries, visuals and filters in a working draft.

Keep report configuration as code

Version and reuse report definitions. Make changes in the visual editor or work directly with the definition.

Report directly on Horizon data

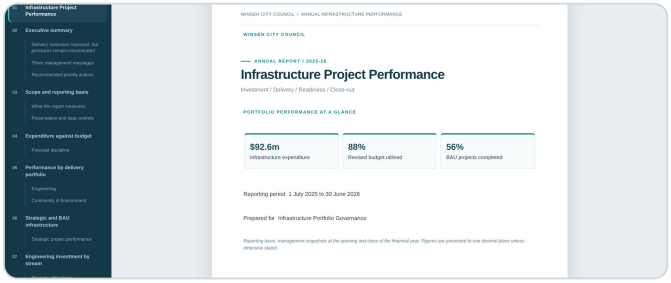

Analyse schedules, milestones, costs and resource demand. Drill into the records behind a figure or connect PostgreSQL data.

Drill from a project register into the record

Deliver dashboards and documents

Embed interactive reports in your application, or create structured documents for print and Word export.

Structured reporting with Word export
